EVERY SPACE HOLDS A POSSIBILITY

THANK YOU

APARNA S BINU

About Me

A fourth-year architecture student drawn to spatial design and visual storytelling - and to the quiet relationships between people and the spaces they inhabit. My process moves through research, observation, and experimentation, with growing fluency in BIM, visualization, and digital modelling.

Outside the studio, videography, classical dance, music, cinema, and travel keep shaping how I see and design space - each one teaching me something about rhythm, narrative, or perspective that finds its way back into my work.

EDUCATION

- 2023-2028
  DC School of Architecture and Design, Vagamon
- 2025-2026
  NOVATR-BIM Professional Course for Architects
- 2021-2023
  Alpha Genius Integrated School Alappuzha

EXPERIENCES

- 2024-2026
  Attended Nasa India Trophies (GRIHA,ANDC,WAT,MSL)
- 2023-2024
  Volunteered Kerala literature Festival at Calicut
- 2025-2026
  Volunteered 72hrs Events team Conducted at DCSAAD
- 2026
  Assisted Ar Shan Samuel for a Beach House Design at Calicut
- 2025-PRESENT
  Content Creator

WORKSHOP

- 2026 - Nasa India Insider Workshop at Monsoon Collective Kochi
- 2023 - Rammed Earth and Clay Modelling Workshop at Urvicosa, Trivandrum
- 2023 - Clay Modelling Workshop at DCSAAD

ACHIEVEMENTS

- 2025-2026
  68th Nasa India Youtube Committee Coordinator
- 2025-2026
  First Prize at 30hr Creativecon Conducted by Kalasalingham University

5. BEYOND ARCHITECTURE

RESIDENCE

ACADEMIC – SEMESTER III
PROJECT – VACATION RESIDENCE
SITE – PULLIKKANAM, VAGAMON
INDIVIDUAL

A vacation residence designed for the serene landscape of Pullikkanam, Vagamon, envisioned as a contemporary retreat that balances comfort, privacy, and a strong connection to nature. The residence is organized through efficient functional zoning, ensuring seamless movement between public, private, and recreational spaces.

The design is conceptualized around the idea of "Framing Nature," where courtyards, large glazed openings, and open living spaces create uninterrupted views and strengthen the connection between the indoors and the surrounding landscape.

A central courtyard introduces natural light and ventilation, while the detached pavilion and swimming pool enhance outdoor living. The architecture combines clean geometric forms, natural materials, and climatic responsiveness to create a calm, modern retreat that blends effortlessly with its surroundings.

Threshold of Serenity

The architecture emphasizes a strong sense of arrival, leading into open, tranquil spaces that foster comfort and relaxation.

COMMUNITY CENTRE

ACADEMIC – SEMESTER IV
PROJECT – COMMUNITY CENTRE
SITE – CHANNAPATNA, KARNATAKA
INDIVIDUAL

The Channapatna Community Centre is envisioned as a public space that encourages community interaction, social engagement, and cultural exchange. The design explores the relationship between architectural form, spatial experience, and collective activities, creating an environment that brings people together through shared spaces.

The geodesic structure forms the defining architectural element of the project, introducing geometric expression and structural efficiency while creating a distinctive spatial identity. Its design explores the potential of geometry to shape an engaging communal environment.

The project aims to balance functionality, accessibility, spatial openness, and community participation, establishing an inclusive setting for everyday interactions and collective activities. The architecture seeks to create a meaningful public place that responds to the social and cultural context of

WHY GEODESIC DOME?

The geodesic dome was chosen for its structural efficiency, geometric appeal, and ability to create a spacious, column-free communal environment. Its interconnected triangular framework distributes loads effectively, while the dome's distinctive form establishes a strong architectural identity for the community centre.

WHAT MAKES A GEODESIC DOME SUITABLE FOR A COMMUNITY CENTRE?

The geodesic dome provides a large, open, column-free interior that encourages flexible community activities. Its triangulated framework ensures structural stability, efficient material usage and a distinctive architectural identity.

MATHRIVA-MATERNITY HOSPITAL

ACADEMIC – SEMESTER V
PROJECT – 100-BED G+3 HOSPITAL
SITE – PALITANA, GUJARAT
INDIVIDUAL

A 100-bed Maternity and Childcare Hospital in Palitana, Gujarat, designed as a specialized healthcare facility focusing on maternal and paediatric care. The G+3 building is organized through efficient functional zoning and circulation, ensuring smooth movement between public, clinical, inpatient, and service areas.

The design is conceptualized around the idea of the womb, symbolizing protection, nurturing, and the beginning of life. This concept shapes the spatial experience, creating a supportive and reassuring environment for mothers and newborns.

A skylight garden on the third floor introduces natural light and greenery into the building. The architecture balances functionality, hygiene, accessibility, and patient well-being, creating a modern healthcare environment suited to its climatic and contextual setting.

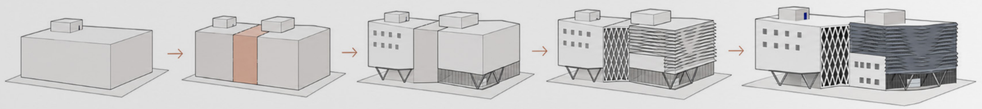
FORM DEVELOPMENT



01 BASE MASS
Site footprint as a simple orthogonal mass.

02 FUNCTIONAL DIVISION
Divide into three volumes — clinical block (left), circulation core (centre) and patient ward (right).

03 VOLUME ARTICULATION
Raise and articulate the blocks, introduce pilotis / structural supports and a recessed ground floor.

04 FACADE SYSTEMS
Introduce the diagonal X-braced glazed connector and horizontal layered shading fins to the patient ward block.

05 FINAL FORM
Assembled hospital form with clinical block, X-braced circulation core and layered patient ward facade, with elevated and recessed ground floor.

CONCEPT

Inspired by the protective nature of the womb, the concept, The Protective Embrace, envisions the hospital as an architectural envelope that nurtures, protects and supports life. Through a composition of solid volumes, layered façades and filtered transparency, the design establishes a balance between privacy and openness. The diagonal lattice and dynamic horizontal façade act as protective outer layers, while the internal spaces are organised to provide comfort, accessibility and a sense of security for mothers, children and families.

FACADE DETAILS

- Reduces direct solar glare
- Ensures visual privacy
- Allows diffused daylight
- Improves thermal comfort

BEYOND
ARCHITECTURE

Beyond architecture, I find inspiration in the many ways of exploring creativity and expression. Dance allows me to connect with rhythm and movement, while anchoring has helped me build confidence and connect with people. Through photography and videography, I enjoy capturing moments, observing details, and telling stories through a visual lens.

Travelling introduces me to new places, cultures, and perspectives, while music and cinema inspire my appreciation for emotion and storytelling. Together, these interests shape how I observe and experience the world, allowing me to find inspiration beyond the boundaries of architecture.
